

ABDULLAH

STUDENT OF SOFTWARE ENGINEERING

Rawalpindi, Pakistan | theabdullahx9779@gmail.com | Github: github.com/theabdullah597

SUMMARY

Software Engineering student (6th semester) with hands-on experience in MERN stack development and applied machine learning. Built multiple full-stack applications and predictive models using real-world datasets. Seeking roles as MERN Stack Developer and ML Engineer.

TECHNICAL SKILLS

Languages: JavaScript, Python, SQL

Web: React.js, Node.js, Express.js, HTML, CSS, REST APIs

Databases: MongoDB, MySQL

Tools: Git, GitHub

ML: Scikit-learn, Pandas, NumPy, Data Preprocessing, Model Evaluation

PROFESSIONAL EXPERIENCE

Feb 2026 - Present

Web Developer — UK-Based Company (Operating in Pakistan)

Developed and maintained responsive web applications using MERN stack technologies

Improved application performance by optimizing database queries and backend logic

Collaborated with team members to deliver features on time and meet client requirements

PROJECTS

Custom Design & Delivery System (Shirts & Mugs)

Role: MERN-Stack Developer

- Built a customizable product platform allowing users to design and order items
- Integrated dynamic UI components for live design preview using React
- Developed backend services for order processing and data storage
- Improved user engagement through interactive design features

House Price Prediction (ML)

Role: Machine Learning Developer

- Built regression models using Python and Scikit-learn to predict housing prices
- Performed data cleaning, feature engineering, and model tuning
- Achieved improved prediction accuracy using optimized regression techniques

Customer Churn Prediction (ML)

Role: Machine Learning Developer

- Developed classification model to predict customer churn using real-world dataset
- Applied feature selection and preprocessing techniques to improve model performance
- Enabled data-driven insights for customer retention strategies

Titanic Survival Prediction (ML)

- Implemented classification models to predict survival outcomes
- Performed exploratory data analysis and feature encoding
- Achieved competitive accuracy using logistic regression and decision trees

Message Spam Detection (ML)

- Built text classification model using NLP techniques
- Applied tokenization and vectorization methods (TF-IDF)
- Improved classification accuracy through model tuning

Diabetes Detection System (ML)

- Developed classification model for early diabetes prediction
- Performed data preprocessing and feature scaling
- Evaluated model using accuracy and confusion matrix

EDUCATION

B.S. Software Engineering

Capital University of Science & Technology(CUST)

Activities

Actively solving programming and ML problems

Building full-stack and AI-based projects for practical experience
